

Chapter 2 Menu Commands

In the menu bar of Richpeace Textile and Fashion Design System V3.0 there are six menu commands (Figure 2-1):

File, view, image, window, option, and help. Its function is similar to the icon command in the command panel,

Users can choose according to their personal habits. Under normal circumstances, During the operation of the Richpeace Textile and Fashion Design System V3.0, icon commands are more intuitive and faster to use, while the usage rate of menu commands is lower. Therefore, Here is only a brief introduction.

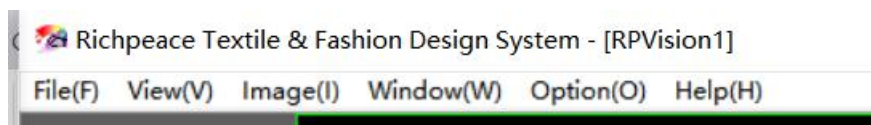

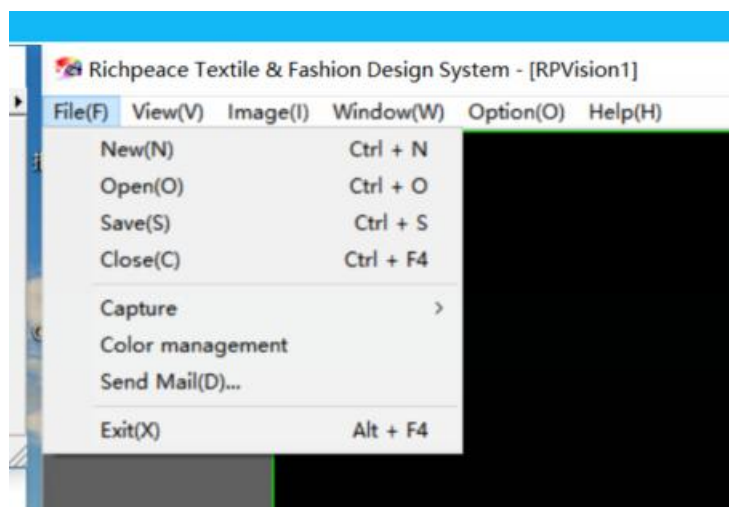

Figure 2-1 Menu command

2-1 File

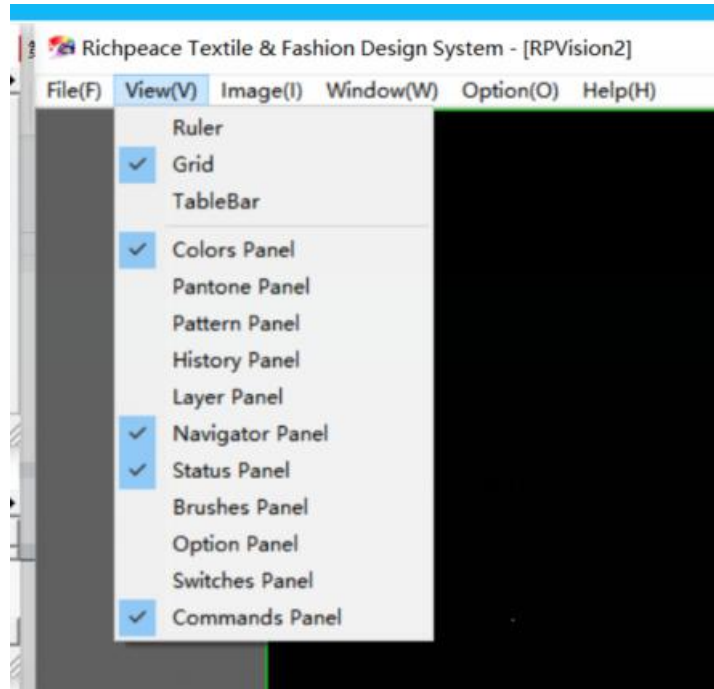

Figure 2-3: View submenu

■Ruler:

Select the ruler and it will appear at the top and left of the document. The scale on the ruler shows the position of the cursor when it is moved.

■Grid:

The grid that displays the default pixels must be displayed when the navigation scale number is greater than 3. The grid can be used to draw and modify the image in detail.

■Tablebar:

If you select the Tablebar, when you open more than two documents, you can switch between documents through the tab in the upper left corner of the drawing area.

■Color panel:

Select this option, the current operation panel displays the color panel.

※**Note:** The pattern panel, history panel, etc. in the view submenu command are the same as the color panel.

2-3 image:

The image command is to make the image achieve the desired effect through filter processing. The functions of the image sub-menu commands (Figure 2-4) are the same as those in the command icon area, which will be explained in detail later, which is omitted here.

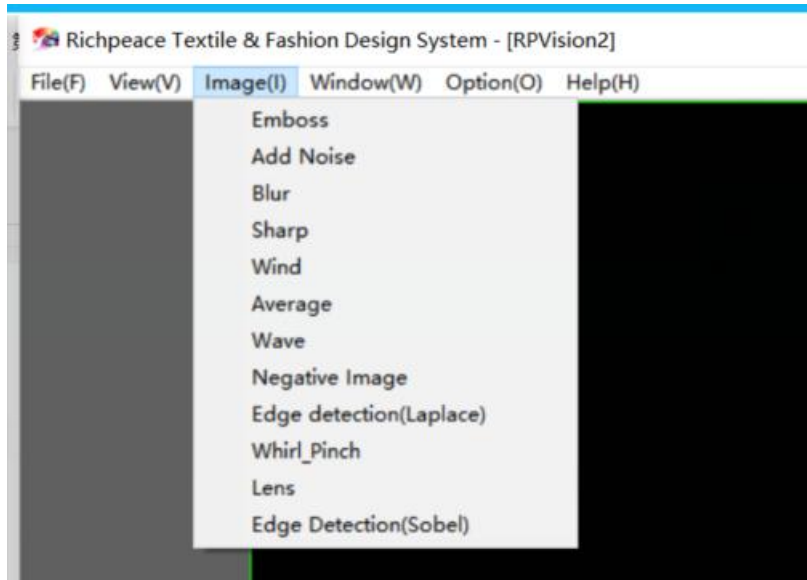

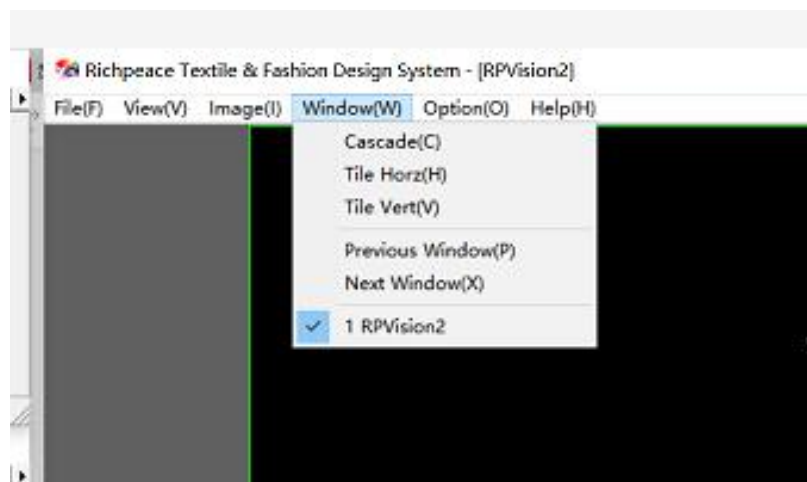

Figure 2-4 Image submenu

2-4 window:

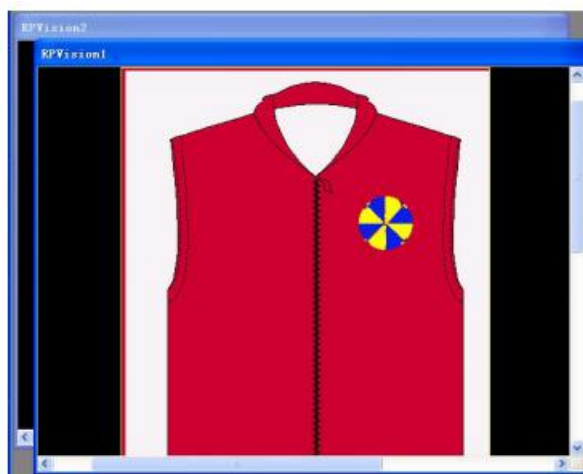

The window menu command is to control or display the number of open windows of Richpeace Textile and Fashion Design System V3.0 and their arrangement. When multiple documents are opened in the window at the same time, the name of each document will be displayed under the command item of the submenu of the window, and the selected mark will be marked on the current document (Figure 2-5).

2-5 Window submenu

■Cascade:

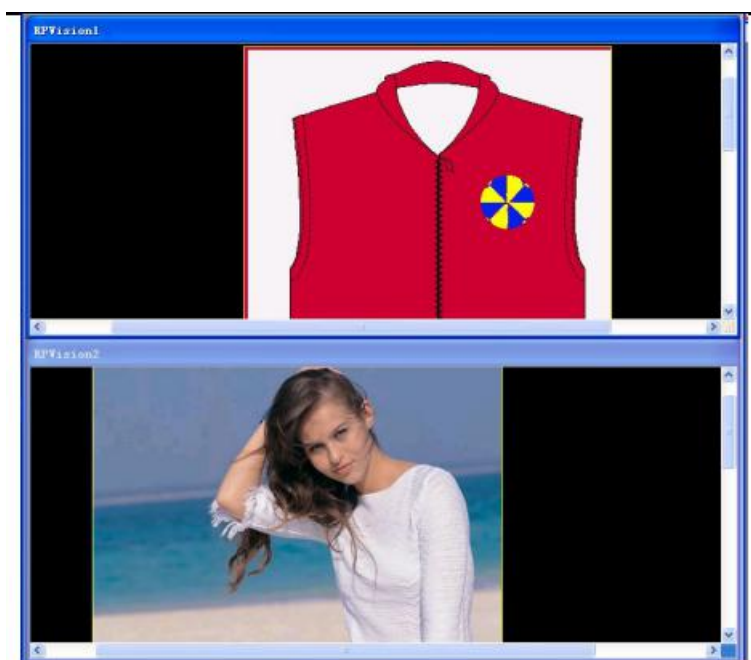

When multiple document windows overlap each other, the current document is placed in the front (Figure 2-6).

2-6 Window cascade

■Tile horiz:

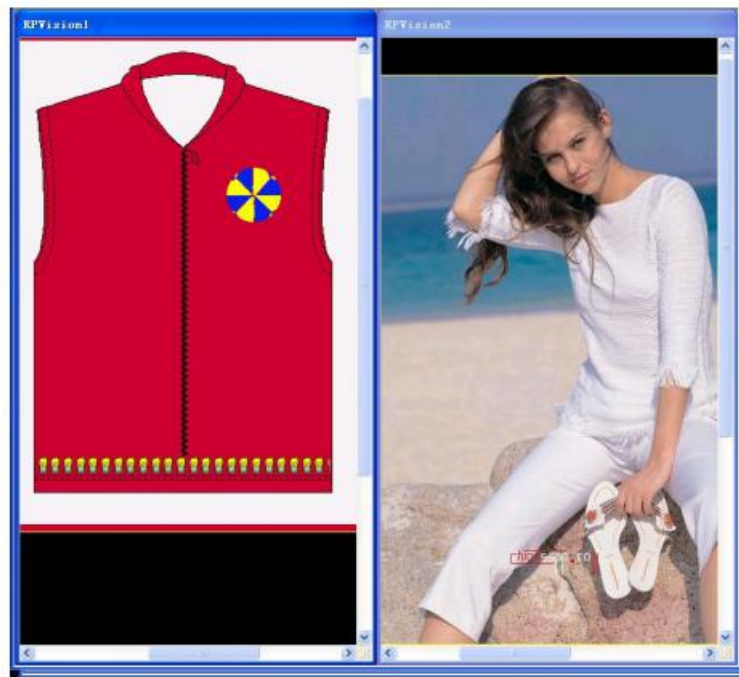

Multiple document windows are arranged horizontally on the screen in turn (Figure 2-7).

2-7 Window Tile horiz

■Tile Vert:

Multiple document windows are arranged vertically on the screen (Figure 2-8)

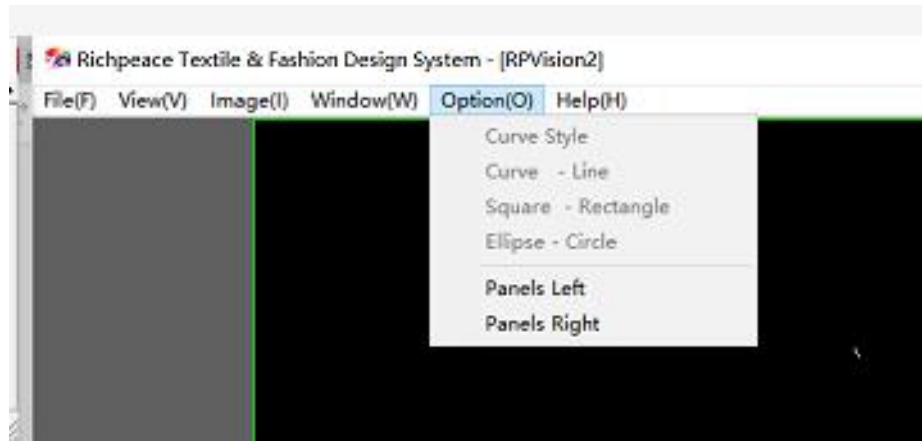

2-8 Window Tile Vert

■Previous Window and next Window

When multiple documents are opened in the drawing workspace, you can switch the display between multiple documents through the previous sub-menu command and the next sub-menu command. The previous submenu command is applied to the previous document of the current document, and the next submenu command is applied to the next document of the current document.
